

Analytical Modeling in Applied Electromagnetics

Sergei Tretyakov

December 31, 2002

Contents

Preface	v
1 Introduction	1
1.1 Background and Applications	2
1.2 Organization of the Book	8
References	9
2 Thin Layers and Sheets	13
2.1 Introductory Notes	13
2.2 Second Order Impedance Boundary Conditions for Thin Material Layers	16
2.2.1 Vector Transmission-Line Equations	17
2.2.2 Derivation of Impedance Conditions	20
2.2.3 Other Forms of Approximate Boundary Conditions for Thin Layers	21
2.2.4 Example: Partially Filled Waveguide	24
2.2.5 More Complicated Layers	26
2.3 Exact Boundary Conditions	31
2.3.1 Exact “Averaging”	31
2.3.2 Boundary Conditions	32
2.4 Vector Circuit Interpretation. Layers Between Arbitrary Media	33
2.5 Thin Sheets of Dielectrics, Magnetics, and Metals	38
Problems	41
References	41
3 Interfaces and Higher Order Boundary Conditions	43
3.1 Higher Order Impedance Models for Interfaces with Conductors	44
3.1.1 Exact Surface Impedance Operator	44
3.1.2 Approximations	46
3.1.3 Numerical Examples: Accuracy of Approximate Solutions	49

3.2	Applications to Numerical Techniques: Absorbing Boundary Conditions	51
3.2.1	Impedance Operator and Engquist-Majda Operator	53
3.2.2	Absorbing Boundary Conditions	54
3.3	Higher Order Models of Thin Layers	58
3.3.1	Thin Layers with $ \beta d \ll 1$	59
3.3.2	Slowly Varying Fields along the Interfaces	60
3.4	Higher Order Impedance Boundary Conditions for Layers on Metal Surfaces	62
3.4.1	Exact Surface Impedance Operator	62
3.4.2	Thin Layers Covering Highly Conducting Bodies	64
	Problems	65
	References	66
4	Periodical Structures, Arrays, and Meshes	69
4.1	Floquet Modes	69
4.1.1	Definition for Periodical Waveguides	70
4.1.2	Example: Array of Parallel Current Lines	71
4.2	Averaged Boundary Condition for a Simple Structure: Array of Wires	74
4.2.1	Summation of Wire Fields	76
4.2.2	Averaged Boundary Condition	79
4.2.3	Equivalent Transmission-Line Formulation	81
4.2.4	Another Form of the Averaged Boundary Condition	82
4.3	Reflection and Transmission Properties of Wire Grids	83
4.3.1	Reflection and Transmission Coefficients	83
4.3.2	Numerical Examples	84
4.4	Wire Grids: Generalizations	85
4.4.1	Rectangular Cells	85
4.4.2	Grids of Metal Strips	86
4.5	Dense Arrays of Particles	88
4.5.1	The Local Field	88
4.5.2	Energy Conservation and the Imaginary Part of the Interaction Constant	95
4.5.3	Equivalent Sheet Condition for Dense Arrays of Scatterers	98
4.6	Double Arrays of Scatterers	101
4.6.1	Interaction between Parallel Arrays	102
4.6.2	Reflection and Transmission through Double Arrays	108
4.6.3	Reflection from an Array Near a Metal Screen	109
4.7	Diffraction by Edges of Wire Grids	111
	Problems	113
	References	114

5	Composite Materials	119
5.1	Constituents of Composites and Metamaterials: Thin-Wire Inclusions	119
5.1.1	Polarization of Loaded Wire Dipoles	120
5.1.2	Polarization of Loaded Loops	124
5.1.3	On the Excitation of Conducting Particles by External Magnetic Fields	130
5.2	Maxwell Garnett Model	132
5.2.1	The Local and the Averaged Fields	132
5.2.2	Clausius-Mossotti and Maxwell Garnett Formulas	137
5.2.3	Surface Effects	140
5.3	Transmission Lines with Periodical Insertions, Pass and Stop Bands	145
5.3.1	Dispersion Equation	145
5.3.2	Power Flow, Forward and Backward Waves	149
5.4	One-Dimensional Electromagnetic Crystals	156
5.4.1	Dispersion Equation and Low-Frequency Model	156
5.4.2	Reflection and Transmission in Finite Structures	159
5.5	Wire Media	164
5.5.1	Dispersion Equation	165
5.5.2	Reflection Coefficient	170
5.5.3	Dense Grids	172
5.5.4	Quasistatic Modeling of Wire Media	175
5.6	Three-Dimensional Electromagnetic Crystals	180
5.6.1	Basic Assumptions and Main Relations	181
5.6.2	General Eigenvalue Equation	182
5.6.3	Frequency Dependence of the Effective Refraction Index	184
	Problems	186
	References	187
6	Applications in Metamaterials and Artificial Impedance Surfaces	193
6.1	Metamaterials with Engineered and Active Inclusions	194
6.1.1	Arrays of Small Loaded Wire Particles	194
6.1.2	Example: The Perfectly Matched Layer	197
6.2	Thin Artificial Layers and Sheets	202
6.2.1	Thin Resonant Coatings	202
6.2.2	Simulating Thin Material Layers	205
6.3	Loaded Wire Media	208
6.3.1	Dispersion Equation	208
6.3.2	Properties of Wire Media with Different Loads	210
6.3.3	Quasistatic Modeling of Arrays of Lossy and Loaded Wires	215
6.4	Artificial Impedance Surfaces	217

6.4.1	Equivalent Surface Impedance of Mushroom Structures	221
6.4.2	Generalizations	225
6.4.3	Comparison with the Local Quasistatic Model and Experiment	227
6.4.4	Oblique Incidence on Mushroom Structures	229
6.4.5	Surface Waves Along Impedance Surfaces	233
6.4.6	Antenna Applications of Artificial Impedance Surfaces	236
6.5	Materials with Negative Permittivity and Permeability	240
6.5.1	Basic Electromagnetic Properties of Veselago Media .	241
6.5.2	Slabs of Veselago Media: Impedance Boundary Conditions	243
6.5.3	Perfect Lens	247
6.5.4	Electromagnetic Crystals with Veselago Layers	251
6.5.5	Possible Realizations of Media with Negative Parameters	253
	Problems	258
	References	259
	List of Symbols	264
	About the Author	266
	Index	267
